

ProStart™ Piglet Gel

Optimise piglet performance from the **first days of life.**

- ✓ Promotes early consumption of solid feed
- ✓ Provides nutritional support for normal digestive development
- ✓ Contributes to normal immune function as part of a balanced diet

An early nutrition complementary feed for piglets in the form of gel granules, formulated to provide nutritional support during the first stages of life, particularly in larger litters.

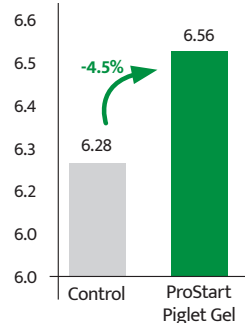

- ✓ Highly palatable gel granules to encourage early intake
- ✓ Complements sow milk during the early life stage
- ✓ Suitable for use where litter size and piglet variation are greater
- ✓ Provides targeted nutritional support for young piglets
- ✓ Supports feed transition from milk to solid feed
- ✓ Supports normal growth and development
- ✓ Easy to offer directly to piglets in the farrowing period

Directions for use:

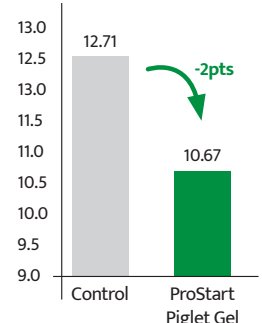

Start feeding ProStart Piglet Gel from 3-4 days of age and continue for 10 days. Use the mini feeder or trough, and place them in front of the sow. Distribute several times a day. Adjust the daily distributed dose according to the piglets' consumption. During the first few days, consumption will be approximately 100g per day per animal, then it will increase day by day to reach at least 200g per day per animal.

Average individual weight at weaning (kg)
(p-value < 0.0001)

Mortality rate before weaning (%)
(p-value < 0.001)
